

Job Title: Manager - Corrosion Control

JOB SUMMARY:

Responsible for operations, maintenance and direct supervision of Cathodic and Atmospheric Corrosion programs for all NY and CT OpCo's. This position will have oversight authority for all corrosion control practices at MNG and BGC.

- Responsible for staff of Analysts, Bargaining Unit employees, and contractors to meet regulatory compliance of mandated Cathodic and Atmospheric corrosion control programs. Prepares and communicates program status and performance.
- Promotes employee development and training opportunities.
- Provides guidance and mentoring to promote operational best practices.
- Responsible for all electronic corrosion data inspection processes and inspection databases.
- Supports Gas Field Operations and other departments.
- Applies company, industry, local, state, national codes, and standards, and ensures compliance with regulatory requirements.
- Interacts with customers, developers, municipalities, agencies and others.
- Manages technical support contractors and consultants.
- Reviews, maintains and utilizes SAP equipment data and SAP processes supporting the corporate use of contractor/consultant resources.

Role and Responsibilities:

Employee is assigned to a primary Corporate location with travel to other operating divisions or Avangrid locations as needed. Occasional work outside of the service territory for industry or government meetings or training may occur.

1. Supervise and manage employees and contractors performing corrosion control work activities to meet Federal and State mandated requirements.
2. Responsible to develop policies/procedures and schedule work to safely meet or exceed departmental and corporate goals and objectives.
3. Oversee department's initiatives, the preparation of budgets and the tracking, cost control, and reporting of actual O&M and capital expenditures using SAP and other reporting methods.
4. Responsible for Corrosion Group goals and objectives and ensuring alignment with department and corporate goals. Performs performance evaluations, recommends candidates for hire and salary adjustments, provides coaching and counseling toward performance improvement and guides development of staff in group. Manages the application of the union labor agreement.
5. Responsible for the preparation and communication of reports to document performance in meeting department, corporate, and regulatory goals and requirements.
6. Represent the company on various teams or committees with Avangrid, state, regional or national issues. Act as liaison for the Company with customers and with state and municipal agencies to coordinate efforts.
7. Interfaces with and supports Gas Planning, Engineering and Delivery and Gas Field Operations. Provides resources and technical expertise to support the design, operation, maintenance and inspection of distribution and transmission systems

Education & Experience Required:

- Associate's Degree in a Technical field of study with a minimum of 7 years of technical

experience in gas systems or related experience or a High School Diploma/GED equivalent with a minimum of 10 years of experience can be substituted for a degree.

- Bachelor's degree or higher with minimum of 4 four years of technical experience in gas systems or Master's degree in a Technical field of study with a minimum of 2 years related experience is also acceptable. Bachelor's Degree is preferred.

Skills/Abilities:

- Technical skills in the field of corrosion operations and knowledge of gas distribution.
- Good oral and written skills.
- Teamwork orientated.
- Technical problem-solving abilities.
- Ability to manage complex databases.
